Definitions

Median = typical prediction error MAPE = average prediction error P90 = 9-in-10 worst-case error Holdout = parts the model never trained on

Error Distribution & Calibration

Where the model lands and which bands of the target it handles best

Accuracy is strongest in the 9,000–12,793 band (17.5% median error) and weakest in 500–4,400 (61.2%).

Feature Importance

Top 10 attributes the model relies on when estimating price

The top 3 features (manufacturer, state, condition) explain 76% of the model's decisions.
